

Vendra Divya Sree

Full Stack Developer

8074469897 | Bengaluru, Karnataka | divyasreevendra@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

Full Stack Developer with 2+ years of experience delivering production-grade, end-to-end features for enterprise platforms. Proficient in building scalable React.js applications and Java/Spring Boot microservices spanning AI-powered interfaces, real-time dashboards, rule compilation engines, and multi-cloud REST APIs. Adept at deploying and integrating systems with MongoDB, Redis, Kafka, and Kubernetes on AWS.

SKILLS

Frontend	React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Vite, React Router, Functional Components, Hooks, Context API, Tailwind CSS
Backend	Java, Spring Boot 3, Spring Security, Spring Data MongoDB, Maven, REST API Design, Microservices Architecture
Cloud & DevOps	AWS S3, AWS Secrets Manager, Azure Blob Storage, Kubernetes, Docker, GitHub Actions, GitLab CI/CD
State & Data	Zustand, Redux Toolkit, RTK Query, Axios, REST APIs, OpenAPI Generator, Microservices Integration
UI & Visualization	Radix UI, shadcn/ui, Material UI (MUI), Ant Design, React Bootstrap, Chart.js, Recharts, ApexCharts, ECharts, CanvasJS, D3.js, Leaflet, React Leaflet, Fabric.js, Croppie
Architecture & Performance	Code Splitting, Lazy Loading, Memoization, Debouncing, Custom Hooks Architecture, Component-Driven Development
Security & Realtime	JWT, RBAC, MFA, Session Management, OAuth2, WebRTC, SIP.js
AI Features	Chatbot UI
Forms & UX Utilities	React Hook Form, jsPDF, html2canvas, React Toastify, SweetAlert2
Tools	Git, Jira, ESLint, Prettier, Husky, Maven

TECHNICAL EXPERIENCE

Fullstack Developer First Hive	Oct 2023 — Present Bengaluru, Karnataka
- Architected and delivered a scalable Customer Data Platform frontend using React 19, TypeScript, and Vite, serving enterprise teams managing audience segmentation, multi-channel campaign orchestration, and automated customer journeys. Integrated 8+ RESTful microservices via OpenAPI-generated TypeScript Axios clients, eliminating ~60% of manual API integration effort and enforcing end-to-end type safety. - Built a drag-and-drop email template builder using Tiptap and Topol.io, enabling non-technical marketers to design and launch responsive email campaigns independently removing dependency on engineering for every campaign iteration. - Optimized client and server state using Zustand and TanStack React Query, reducing redundant API calls by ~40% and improving data consistency across multi-step campaign workflows. - Developed an AI-powered marketing assistant with streaming API responses and conversational UI, enabling marketers to generate audience segments, campaign copy, and journey logic through natural language reducing campaign setup time from hours to minutes. - Built a secure banking web application using React 19, Javascript with RBAC and SSO, enabling seamless multi-role authentication and protected access control for 5+ user roles across internal and external stakeholders. - Integrated AML and Hunter APIs for real-time fraud detection and identity verification, reducing manual review time during customer onboarding by flagging high-risk profiles automatically. - Engineered a WebRTC-based real-time call center using SIP.js, enabling browser-native voice communication for agents and eliminating the need for third-party softphone software. - Designed and built a multi-module Spring Boot microservices platform (Java 17, Maven) including a rule compilation engine that converts audience targeting conditions (device, e-commerce, exit intent, user lifecycle) into optimized JavaScript, served to the SDK via a Redis cache. - Developed a synchronous transactional notification microservice supporting SMS, Email, and WhatsApp channels with placeholder-based template resolution; integrated with downstream messaging service via REST and deployed on Kubernetes with secrets managed through AWS Secrets Manager - Built a reusable JWT-based Spring Security authorization library consumed across multiple microservices for multi-tenant authentication, role-based access control (RBAC), and per-account request isolation — eliminating duplicated auth logic across services - Implemented a RESTful Dashboard API with multi-cloud file upload support, account settings CRUD with compound indexing, and OpenAPI/Swagger documentation for developer integration	

Front-end Developer
Arshil

Apr 2023 — Oct 2023
Bengaluru, Karnataka

- Developed a scalable React SPA to manage products, customers, and sales workflows, reducing manual data entry time by **~35%** through reusable, responsive component architecture used across **10+ modules**.
- Built high-performance form and data grid workflows using React Hook Form, Yup, and MUI Data Grid, handling 1,000+ row datasets with inline validation and cutting form error rates by **~50%** compared to the previous implementation.

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering
Vishnu Institute of Technology
Bhimavaram, AP • Percentage: 73%

June 2014 — April 2018
